EDUCATION

MSc Computer Science

University of Salzburg

2025 – 2027

BSc Software Engineering

Arbaminch University

2019 – 2024

GPA 3.83 / 4.00

Great Distinction · Dean's List

SKILLS

Languages

Dart

Python

Go

Java

JS

C++

C#

Frameworks

Flutter

Django

FastAPI

Laravel

Spring Boot

Databases & Cloud

PostgreSQL

MySQL

Firebase

Architecture

Clean Arch

MVVM

BLoC

Docker

LANGUAGE

Amharic

English

German A1

CERTIFICATION

IBM CI/CD

Google Cloud Core Infrastructure

GKE — Architecting with Kubernetes

PROFILE

Production software engineer who has shipped cross-platform applications in healthcare, energy, e-commerce and entertainment. Experience owning full delivery cycles from architecture to deployment with cross-functional teams. MSc Computer Science student at University of Salzburg. Focus: Data mining and ML engineering.

EXPERIENCE

Software Engineer

Live on Play Store

Sep 2024 – Jun 2025

Power Ethiopia Plc · Addis Ababa, Ethiopia

- Built a cross-platform solar education system from scratch (Flutter mobile + web) via Play Store release, delivering courses, authentication, and progress tracking to students across the nation via a REST API integration layer.
- Created a shared Flutter component library that is reused across mobile and web surfaces, reducing per-screen development overhead by 40%.

Software Engineer — Internship

Live on Play Store

Mar 2023 – Jun 2023

Awura Tech Plc · Addis Ababa, Ethiopia

- Built a production event management app (Owl Events), live on Google Play Store, providing end-to-end digital ticketing (discovery, purchase, and real-time QR validation) in a 4-role stakeholder system (vendors, organizers, users, admins).
- Decoupled domain logic from UI using Clean Architecture to make the QR validation module testable independently of the live event infrastructure.

Mobile App Developer — InternshipOct 2022 – Oct 2023

HealthPilot Technologies · Nashville, Tennessee, USA

- Designed and built the entire mobile frontend from Figma prototypes. - Independently established a modular MVVM architecture with strict separation of UI/business logic across all screens.
- Developed patient-doctor matchmaking modules and localized BLoC state management workflows for seamless user data sync & zero memory leaks.

PROJECTS

Zmare — Music Streaming App

Flutter · Dart · Laravel backend

- Co-engineered a feature-rich audio streaming client with playlist management, queue control, and continuous playback integrated against a Laravel REST backend, centralizing audio logic in a singleton BLoC controller to eliminate playback state bugs across playlist, queue and now-playing screens.

WapTrend (SayHi) — Social Platform

Flutter · Dart

- Built core social features: feed display, user profiles, follow mechanism, and post interactions using composable Flutter widgets and a feature-centric architecture. Used paginated ListView display and lazy image loading to ensure smooth performance on mid-range Android devices.

N-Grocery — Grocery Delivery Platform

Flutter · Dart · Dual-app architecture

- Built two separate flutter apps, one for customers (product browsing, cart, checkout, live order tracking) and one for vendors (management app). Connected the two apps through a common REST API backend.
